Program Overview

The Pharmacy Technology program prepares graduates for positions working under the supervision of a licensed and registered pharmacist in retail and institutional settings. Students completing the program will have a basic understanding of human anatomy and physiology, medical terminology, pharmacy law and ethics, and the therapeutic classification and use of the top 200 prescription drugs. They will also become conversant with such activities as: the interpretation of prescriptions, ordering product preparation, stocking, inventory control, billing, and customer relations. The program provides both classroom and online instruction, laboratory demonstrations and skills practice, and two practicum placements in the community.

The Pharmacy Technology program accepts 12 to 14 students each fall semester. Students joining that cohort must hold a high school diploma or GED, and have already completed prerequisite coursework in the following areas: an overview of working in Health Care; keyboarding and basic computer skills; human anatomy and physiology, and math computations in allied health fields. A criminal background check and drug screening are also required.

Program Detail

- Accepts students in August
- Requires 1 year to complete (Fall semester, Spring semester, and Summer term).
- Divided into three components: seated and online instruction, laboratory demonstrations and practice, and practicum/externship placements.
- Practicum/externship placements may require working evening or weekend hours.
- Upon successful completion of the program, the student is prepared to sit for the Pharmacy Technician National Certification Exam.
- Each course must be completed with a C or better before the student can progress in the program.
- For more information, go to https://www.isu.edu/pharmacytechnology/program-handbook--forms/.
