Doctor of Philosophy in Experimental Psychology

Doctoral training in Experimental Psychology provides students with education and research training in the core areas of psychological science, e.g., personality, social psychology, learning, cognition, developmental psychology, and behavioral neuroscience. Students who complete the doctoral program may pursue academic or non-academic careers. To prepare for their future careers, students need to (i) have a solid foundation in basic areas of psychology (breadth of knowledge) and also (ii) develop an expertise in their research areas (depth of knowledge). Our program offers a variety of courses to help students accomplish their career goals.

Goals

Six program goals have been defined:

- Demonstrate area-specific research knowledge and expertise
- Demonstrate breadth of knowledge and integration of core areas in psychology
- Demonstrate general competencies in research methodology and analysis
- Develop effective communication skills
- Demonstrate professionalism
- Demonstrate ethical research conduct
- Develop respect for diversity

Each goal has associated objectives and competencies.

Master of Science in Psychology

Students enrolled in the Clinical and Experimental Psychology doctoral programs earn a Master's of Science in Psychology as they work towards their doctorate, for course work completed along the way. This is not a stand-alone Master of Science in Psychology program.

Goals

To ensure that students who receive a master’s degree in psychology will be prepared for further post-graduate study and for careers in related areas, the department has identified the following goals:

- Understand core areas and the breadth of the field of psychology and its applications;
- Be able to integrate knowledge and theories across, and to think critically about, topics within the domains of psychology;
- Be competent in library information technology and computer applications related to the study of psychology;
- Be competent in scientific methodology and analysis as they apply to the study of psychology;
- Be able to communicate effectively, in both oral and written form, about issues within the field of psychology;
- Actively participate in the research process; and
- Understand and comply with the APA code of ethics pertaining to research conduct.

Each goal has associated objectives and competencies.
